1. Purpose

This guide defines the processes and standards for providing timely, professional, and effective customer support. It aims to ensure consistent service quality and high customer satisfaction across all TechNova products.

2. Scope

This guide applies to:

- Customer Support Executives
 - Technical Support Engineers
 - Customer Success Managers
 - Product Specialists
 - Support Team Leads
-

3. Customer Support Overview

The Customer Support team is responsible for:

- Handling customer inquiries
- Resolving technical issues
- Managing service requests
- Tracking incidents
- Escalating complex problems
- Collecting customer feedback

The team works closely with Engineering, Product, and IT departments.

4. Support Channels

Customers can contact support through:

- Email
- Customer Support Portal
- Live Chat
- Telephone
- Mobile Application
- Self-Service Knowledge Base

Every customer interaction generates a unique support ticket.

5. Ticket Lifecycle

A standard support ticket follows this workflow:

1. Ticket Created
2. Initial Review
3. Priority Assigned
4. Investigation
5. Resolution
6. Customer Confirmation
7. Ticket Closure

All ticket updates must be documented.

6. Ticket Priority Levels

Priority	Description	Example
P1	Critical	Complete system outage
P2	High	Major feature unavailable
P3	Medium	Functional issue with workaround
P4	Low	General inquiry or enhancement request

Priority is determined by business impact and urgency.

7. Service Level Agreements (SLAs)

Priority	First Response	Resolution Target
P1	15 Minutes	4 Hours
P2	1 Hour	8 Hours
P3	4 Hours	2 Business Days
P4	1 Business Day	5 Business Days

Customers must be informed if resolution times are expected to exceed SLA targets.

8. Customer Communication Standards

Support representatives should:

- Use professional and courteous language
- Acknowledge tickets promptly
- Provide regular status updates
- Explain technical issues in simple language
- Confirm resolution before closing tickets

Never make commitments that cannot be fulfilled.

9. Escalation Process

Issues are escalated when:

- SLA targets are at risk
- The issue cannot be resolved by Level 1 Support
- A software defect is identified
- A security concern is reported
- Customer impact is severe

Escalation Flow:

Level 1 Support

↓

Level 2 Technical Support

Engineering Team

Product Manager

Customer Success Manager

10. Knowledge Base Usage

Support staff should search the internal Knowledge Base before escalating issues.

Knowledge Base articles include:

- Product Documentation
- Troubleshooting Guides
- FAQs
- Known Issues
- Release Notes

New solutions should be documented after issue resolution.

11. Common Customer Issues

Issue	Recommended Action
Login Failure	Verify credentials and MFA
Password Reset	Guide customer through self-service portal
Slow Performance	Check service status and logs
Report Generation Failure	Verify permissions and data availability
API Integration Error	Validate API credentials and endpoint configuration

12. Customer Satisfaction (CSAT)

Customer satisfaction is measured after each resolved ticket.

Metrics include:

- Overall Satisfaction
- Resolution Quality
- Response Time
- Professionalism
- Ease of Communication

Feedback is reviewed monthly to improve service quality.

13. Support KPIs

The Customer Support department tracks:

- First Response Time
- Average Resolution Time
- Ticket Backlog
- First Contact Resolution Rate
- Customer Satisfaction Score (CSAT)
- Net Promoter Score (NPS)
- SLA Compliance

These KPIs are reviewed during monthly performance meetings.

14. Best Practices

Support representatives should:

- Read the complete ticket before responding
- Verify customer details
- Document every action taken
- Escalate issues promptly when required
- Follow up after resolution
- Continuously update product knowledge

Professional communication builds customer trust.

15. Frequently Asked Questions

How is ticket priority determined?

Priority is based on the business impact and urgency of the issue.

When should a ticket be escalated?

If the issue cannot be resolved within the assigned support level or if SLA targets are at risk.

Can a resolved ticket be reopened?

Yes. Customers may request reopening within seven days if the issue persists.

What should be documented in every ticket?

Issue description, troubleshooting steps, actions taken, resolution, and customer confirmation.

Why is customer feedback important?

It helps improve support quality, identify recurring issues, and enhance products and services.

Customer Support Summary

Area	Standard
Ticketing System	Mandatory
SLA Monitoring	Continuous
Knowledge Base	Required

CSAT Survey	After Ticket Closure
-------------	----------------------

Escalation Process	Defined
-----------------------	---------

Customer Updates	Mandatory
---------------------	-----------
