1. Purpose

This document presents real-world business scenarios and their resolutions. It helps employees understand how company policies and procedures are applied in practical situations.

2. Scope

These case studies are intended for:

- Managers
 - Engineers
 - IT Teams
 - HR Teams
 - AI Engineers
 - Customer Support Teams
 - New Employees
-

3. Case Study 1 – New Employee Onboarding

Background

A new AI Engineer joined the Chennai office and required immediate access to company systems.

Challenge

The employee needed:

- Laptop
- Email Account
- VPN Access
- GitHub Access
- Development Environment
- HR Portal Access

Actions Taken

1. HR completed employee registration.
2. IT issued a company laptop.
3. Email and Teams accounts were created.
4. VPN and MFA were configured.
5. Engineering granted GitHub access.
6. The AI team installed required development tools.

Result

The employee completed onboarding on the first working day without delays.

Departments Involved

- HR
 - IT
 - Engineering
 - AI Department
-

4. Case Study 2 – Lost Company Laptop

Background

A software engineer reported a lost laptop while traveling for a client meeting.

Challenge

The laptop contained confidential company information.

Actions Taken

1. Employee notified the IT Helpdesk immediately.
2. Information Security disabled device access.
3. VPN credentials were revoked.
4. Passwords were reset.
5. Remote device wipe was initiated.
6. A replacement laptop was issued.

Result

No data leakage occurred, and the employee resumed work within one business day.

Lessons Learned

- Report lost devices immediately.

- Always enable disk encryption.
 - Use MFA for all accounts.
-

5. Case Study 3 – Production Server Outage

Background

The customer portal became unavailable during business hours.

Challenge

Customers were unable to access services.

Actions Taken

1. Monitoring system generated a critical alert.
2. DevOps investigated server health.
3. Engineering identified a database connection issue.
4. Database services were restored.
5. Application functionality was verified.
6. Customers were informed after service restoration.

Result

Service was restored within the four-hour SLA.

Root Cause

Improper database connection pool configuration.

6. Case Study 4 – AI Model Performance Degradation

Background

A document classification model showed reduced prediction accuracy after deployment.

Challenge

Customer complaints increased due to incorrect classifications.

Actions Taken

1. Model performance metrics were reviewed.
2. Data drift was detected.
3. New training data was collected.
4. The model was retrained.
5. Validation tests were completed.
6. The updated model was deployed.

Result

Prediction accuracy improved from **87% to 95%**.

Lessons Learned

- Continuously monitor model performance.
 - Schedule periodic retraining.
 - Track data drift.
-

7. Case Study 5 – Customer Escalation

Background

A customer reported repeated failures while generating reports.

Challenge

The issue remained unresolved after two support interactions.

Actions Taken

1. Ticket escalated to Level 2 Support.
2. Product Engineering investigated logs.
3. A software defect was identified.
4. A hotfix was developed and tested.
5. The update was deployed to production.
6. Customer confirmed successful resolution.

Result

The issue was resolved within SLA, and customer satisfaction improved.

8. Case Study 6 – Phishing Email Incident

Background

Several employees received emails requesting password verification.

Challenge

The emails closely resembled legitimate company communications.

Actions Taken

1. Employees reported suspicious emails.
2. Security Team analyzed the messages.
3. Email gateway blocked the sender.
4. A company-wide security advisory was issued.
5. Employees completed phishing awareness training.

Result

No employee credentials were compromised.

Lessons Learned

- Verify sender identity.
 - Never share passwords.
 - Report suspicious emails immediately.
-

9. Lessons Learned

Across all case studies, the following best practices were identified:

- Follow documented procedures.
- Report incidents without delay.
- Maintain clear communication between departments.
- Keep documentation updated.
- Conduct post-incident reviews to identify improvement opportunities.

- Use preventive measures to reduce future risks.

Case Study Summary

Case Study	Primary Department	Outcome
New Employee Onboarding	HR & IT	Successful onboarding
Lost Laptop	IT & Security	Data protected
Production Outage	Engineering	Service restored
AI Model Degradation	AI Department	Accuracy improved
Customer Escalation	Customer Support	Issue resolved
Phishing Incident	Security	Attack prevented
